

A physics-based technology company solving one of the most difficult environmental problems facing our planet - destroying hard to treat hazardous chemicals in water and wastewater known as PFAS is seeking an investor to raise \$15M to build upon the profitable & growing platform with the current management team.

Providing peace of mind for customers while addressing our biggest environmental challenges:

- Reliable
- Energy efficient
- Reduced air emissions
- Scalable solutions
- Reduced disposal costs

EXECUTIVE SUMMARY

- **Addressing the Problem**
 PFAS or 'forever chemicals' are present in groundwater, landfill leachate, industrial process water, and drinking water. Reducing the amount of contaminants in the world water supply is essential for the health of all people.
 - TAM \$11B + additional \$34B
 - Final destruction is the missing link
- **Affordable & Scalable**
 Affordability is everything. Thermal destruction solutions are too expensive to scale. Electrochemical destruction employs costly exotic electrodes. Plasma Vortex is a more affordable option and an easily-scalable final destruction solution on the market.
 - Competitive solutions are too expensive to scale to size of problem
 - Plasma vortex is the only viable solution
- **Competitive Advantage**
 Onvector's Plasma Vortex is superior and more cost effective than thermal destruction; giving Onvector an edge over competitors. Onvector's strength in innovation provides the industry with:
 - 6 technology patents
 - Pilots in field
 - Successful 3rd party validation

INVESTMENT REQUIRED

- Onvector is raising up to \$15M in equity to build on the growing platform with the current team.

COMPANY FACTS:

Founded: 2012

Headquarters: Boston, Massachusetts

Sectors: Onvector offers Plasma Vortex equipment for PFAS destruction. For the following sectors:

Fire Fighting Foam (AFFF)

Brownfields

Wastewater Sludge

Drinking Water

Composting

Landfill Leachate

Consumer Products

Industrial Processes
